PROFILE SUMMARY

Electronics and Communication Engineering student with hands-on experience in AI, DevOps, cloud technologies, and software development. Skilled in Python, Java, data structures and algorithms, and building scalable solutions through real-world projects involving LLMs, RAG, Docker, Kubernetes, Jenkins, and AWS. Passionate about developing AI-powered applications and cloud-native systems to solve real-world problems.

KEY SKILLS AND TOOLS

Programming: Java, C++, Python, Bash Scripting, SQL

DevOps: AWS, Docker, Jenkins, Terraform, Kubernetes

Core CS: Data Structures and Algorithms, Object-Oriented Programming

Tools: Git, GitHub, Linux (Ubuntu)

PROJECTS

MCP AI Infrastructure Diagnostics Tool

- [GitHub](#)

Built an MCP server that integrated Jenkins, Docker, and Kubernetes into a natural-language AI diagnostics platform.

Designed and implemented diagnostic tools to inspect pod status, logs, container health, and Jenkins build failures through natural language queries.

Implemented secure credential management using environment variables, following industry best practices for secret handling.

Gained hands-on experience with AI agent architecture, including tool calling, client-server communication, and read-only infrastructure observability.

Technologies: Python, MCP, Docker, Kubernetes, Jenkins, Claude Desktop, Git, GitHub

CI/CD Automation Pipeline – DevOps Workflow Project

- [GitHub](#)

Designed and implemented an end-to-end CI/CD pipeline, reducing deployment time through automation.

Built Jenkins pipelines that reduced manual deployment effort by automating build, test, and deployment workflows.

Containerized the application using Docker and managed source code using Git and GitHub.

Pushed container images to Docker Hub and enabled fast, reliable automated deployments.

Technologies: AWS, Jenkins, Docker, Git, GitHub, Docker Hub, Python

AI-Powered RAG Knowledge Retrieval System

- [GitHub](#)

Built a RAG (Retrieval-Augmented Generation) system using Sentence Transformers and ChromaDB for AI-based knowledge search.

Connected the RAG system with an MCP server to provide answers using infrastructure documents and live diagnostics.

Implemented semantic search that significantly improved retrieval accuracy compared to keyword-based search.

Integrated LLMs, vector databases, and embeddings to build an AI-powered retrieval system for infrastructure knowledge.

Technologies : Python, Sentence Transformers, ChromaDB, MCP, Docker, Kubernetes, Jenkins, Git, GitHub

EDUCATION

Bachelor of Engineering in Electronics and Communication Engineering

Sri Krishna College of Engineering and Technology

2023 – 2027 | CGPA: 8.1 / 10
